Hi,				and the second s
I would like to request the f	ollowing searches:			
1. SEQ ID NO: 11 and 12 2. SEQ ID NO:12 in the pr		tabases (commercial and intermercial and intermercial and interference)	terference)	
Thank you very much,				
Delia M. Ramirez, Ph.D. Patent Examiner Recombinant Enzymes-Art Unit USPTO 400 Dulany Street, Remsen Bldg Alexandria, VA 22314 (571) 272-0938 delia.ramirez@uspto.gov		·

Patent No. 6887696;
GENERAL INFORMATION:
APPLICANT: GARGER, Stephen A.;
APPLICANT: TURREN, Thomas H.;
TITLE OF INVENTION: PRODUCTION OF LYSOSOMAL ENZYMES IN TITLE OF INVENTION: PRODUCTION OF LYSOSOMAL ENZYMES IN TITLE OF INVENTION: PLANTS BY TRANSIENT EXPRESSION; FILE REFERENCE: 008010087CPUS06; CURRENT APPLICATION NUMBER: US/09/993,059; CURRENT PILING DATE: 2001-11-13
NUMBER OF SEQ ID NOS: 37
SOSTWARE: FRASESQ for Windows Version 4.0
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         1266

--- CATALYITC ACTIVITY: Hydrolysis of terminal non-reducing N-acetyl-b-galactosamine residues in N-acetyl-alpha-D-galactosaminides.
--- SUBCELLULAR LOCATION: Lysosomal (By similarity).
--- SIMILARITX: Belongs to the glycosyl hydrolase 27 family.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  MEDLINE=94060104; PubMed=8241271; DOI=10.1016/0167-4781(93)90158-A;

TITLE Cloning of human full-length CDSs in BD Creator (TM) System Donor	Vector JOURNAL Unpublished REFERENCE 2 (bases 1 to 1290) AUTHORS Kalnine,N., Chen,X., Rolfs,A., Halleck,A., Hines,L., Eisenstein,S., Koundinya,M., Raphael,J., Moreira,D., Kelley,T., LaBaer,J., Lin,Y., Phelan,M. and Farmer,A. TITLE Direct Submission JOURNAL Submitted (13-MAY-2003) BD Biosciences Clontech, 1020 East Meadow	Circle, Palo Alto, CA 94303, USA COMMENT This CDS clone is a part of a collection of human full length expression clones generated by BD Biosciences Clontech and the Harvard Institute of Proteomics. Each CDS has been cloned in two forms: with and without stop-codon (to allow fusion with C-terminal tag). The CDS has been directionally cloned using BD In Fusion (TM) cloning system between the Sall and HindIII sites of the pDNR-DUAL vector. Additional sequences in the clone: 'ACC' after Sall site	and before 'ATG' to provide Kozak consensus sequence; 'GG' after last codon and before Hindill site to maintain reading frame. Clone distribution: http://bioinfo.clontech.com/orfclones. Location/Qualifiers 1. 1290 1. 1290 Anglam="Hono sapiens" //db_xref="taxon:9606"	/clone="GHO0112X1.0" /clone lib="BD Creator(TM) CDS Library derived from MGC collection" /lab_host="DH5alpha Tl resistant"

This CDS clone is a part of a collection of human full-length expression clones generated by Harvard Institute of Proteomics.
This ORF clone has been cloned with normalized stop-codon. The CDS has been directionally cloned using BD In-Fusion(TW) cloning system between the Sall and Hindlil sites of the pDNR-Dual vector.
Additional sequences in the clone: 'ACC' after Sall site and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 1080

This CDS clone is a part of a collection of human full-length
expression clones generated by Harvard Institute of Proteomics.
This ORF clone has been cloned with normalized stop-codon. The CDS
has been directionally cloned using BD In-Fusion(TM) cloning system
between the Sall and HindIII sites of the pDNR-Dual vector.
Additional sequences in the clone: 'ACC' after Sall site and
before 'ATG' to provide Kozak consensus sequence. Each clone is
clonally isolated and full-length sequence-verified.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          240

This CDS clone is a part of a collection of human full-length

expression clones generated by Harvard Institute of Proteomics.

This ORF clone has been cloned without stop-codon (to allow fusion

With C-terminal tag). The CDS has been directionally cloned using

BD In-Fusion(TM) cloning system between the Sall and HindIII sites

of the pDNR-Dual vector. Additional sequences in the clone: 'ACC'

after Sall site and before 'ATG' to provide Kozak consensus

sequence, 'GG' after last codon and before HindIII site to maintain

reading frame. Bach clone is clonally isolated and full-length
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      20
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    9
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          40

M. Submitted (13-MAY-2003) BD Biosciences Clontech, 1020 East Meadow
Circle, Palo Alto, CA 94303, USA

This CDS clone is a part of a collection of human full length
expression clones generated by BD Biosciences Clontech and the
Harvard Institute of Proteomics. Each CDS has been cloned in two
forms: with and without stop-codon (to allow fusion with C-terminal
tag). The CDS has been directionally cloned using BD In-Fusion(TM)
cloning system between the Sall and HindIII sites of the pDNR-DUAL
vector. Additional sequences in the clone: 'ACC' after Sall site
and before 'ATG' to provide Kozak consensus sequence; 'GG' after
last codon and before HindIII site to maintain reading frame.
Clone distribution: http://bioinfo.clontech.com/orfclones.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   DWGVDLLKFDGCYCDSLENLADGYKHWSLALNRTGRSIVYSCEWPLYWPFQKDNYTE

Patent No. 6890748

GENERAL INPORMATION:
APPLICANT: GARGER, Stephen A.
APPLICANT: TURREN, Thomas H.
APPLICANT: KTWAGAI, Monto H.
TITLE OF INVENTION: PRODUCTION OF LYSOSOMAL ENZYMES IN
TITLE OF INVENTION: PRODUCTION OF LYSOSOMAL ENZYMES IN
TITLE OF INVENTION: PLANTS BY TRANSIENT EXPRESSION
TITLE OF INVENTION: PLANTS BY TRANSIENT EXPRESSION
CURRENT APPLICATION NUMBER: US/09/993,059
PRIOR APPLICATION NUMBER: US/09/993,059
PRIOR APPLICATION NUMBER: US/09/993,059
NUMBER OF SEQ ID NOS: 37
SOFTWARE: FastSEQ for Windows Version 4.0
SEQ ID NO 12
LENGTH: 421
TYPE: PRT
CREANISM: Homo sapiens

Patent No. 5382524

GENERAL INFORMATION:

APPLICANT: Besnick, Robert J.

APPLICANT: Bishop, David F.

APPLICANT: Bishop, David F.

APPLICANT: Mannis A.

APPLICANT: Mannis A.

TITLE OF INVENTION: CLONING AND EXPRESSION OF BIOLOGICALLY

TITLE OF INVENTION: ACTIVE ALPHA-N-ACETYLGALACTOSAMINIDASE

NUMBER OF SEQUENCES: 24

CORRESPONDENCES: 24

CORRESPONDENCE ADDRESS:

ADDRESSEE: PENNIE & EDMONDS

STREET: 1155 Avenue of the Americas
                                               ö
Length 429;
